KeePass
Emergency Sheet

8/28/2019

Database file:

U:\My Documents\KeePass\databases\kwr@lanl.kdbx

You should regularly create a backup of the database file (onto an independent data storage device). Backups are stored here:

Master Key

The master key for this database file consists of the following components:

- **Master password:**

- **Key file:**

  \\dcstorage.lanl.gov\343538\My Documents\KeePass\key.key

  You should create a backup of this file. Backups are stored here:

Instructions and General Information

- A KeePass emergency sheet contains all important information that is required to open your database. It should be printed, filled out and stored in a secure location, where only you and possibly a few other people that you trust have access to.

- If you lose the database file or any of the master key components (or forget the composition), all data stored in the database is lost. KeePass does not have any built-in file backup functionality. There is no backdoor and no universal key that can open your database.

- The latest KeePass version can be found on the KeePass website: https://keepass.info/.
